

Apocalypse and Syntropy

Ulisse Di Corpo¹

In April 2021 some doctors with whom we collaborated alerted us. They sent us studies published in *The Lancet* journal which show that although the relative efficacy of vaccines was 96% (Relative Risk Reduction) as in 96% of cases they led to the production of antibodies, the absolute efficacy (Absolute Risk Reduction) was less than 1% or negative, as in less than 1% of cases the antibodies were effective. In addition, serious adverse effects were already evident. We therefore decided not to get vaccinated, and marginalization begun. Friends, acquaintances, and relatives saw us as infectors and in the winter of 2021-2022 our sources of income were cut off by the government. My wife was suspended from the Register of Psychologists, preventing her from practicing her profession, even if online. I was forbidden to rent my vacation house which I had renovated to accommodate groups. We were barred from post offices, banks, shops, restaurants, bars and could not travel. Starting in August 2021, I begun publishing a monthly update on the epidemiological data on Covid and the identity with the Apocalypse (“*He also caused everyone (small and great, rich, and poor, free and slave) to obtain a mark ... Thus no one was allowed to buy or sell things unless he bore the mark of the beast*”) suggested to expand the book into “*Apocalypse and Syntropy*”, which is available free of charge in the books section of our website: <http://www.sintropia.it/books.htm>, or in paperback at the address: www.amazon.com/dp/B0B5R94LZB. I am here publishing the introductions of the book “*Apocalypse and Syntropy*”.

Introduction

Throughout the Covid period I was lucky enough to receive invaluable information from doctors and researchers. In 2013 I was interviewed by the magazine “*Il Medico Omeopata*” on the mechanisms of action of homeopathy, according to the law of syntropy. The result was a 16-page article² which aroused considerable interest. In 2018, FIAMO (Italian Federation of Homeopathic Doctors and Associations) invited me to give a speech at the XVI national congress which took place in Turin. From there some collaborations began, among which, the most important, with the Effatà school of homeopathy in Lucca.

Soon after the pandemic began, some doctors pointed out that something was not right.

Essentially:

1. Effective therapies were being blocked and the pandemic appeared to be intentional. As a statistician, I analyzed the data on the spread of Covid and I immediately had confirmation: the spread of Covid was intentional
2. The effectiveness of the vaccines was practically nil, actually negative. In this regard, the doctors pointed to the articles published in the medical journal *The Lancet* which highlighted (as early as April 2021) that the efficacy of vaccines, which was reported as relative risk reduction (RRR) and which turned out to be 96%, since in 96% of cases the vaccine stimulated the production of antibodies, if calculated as absolute risk reduction (ARR), i.e. how many times the antibody produced is effective, the efficacy of the vaccine fell below 1%, as the antibodies produced were effective less than 1% of the time. In August 2021, the absolute risk reduction was negative. The vaccinated had an 18 times greater risk of getting infected than the unvaccinated. I began to verify these statements by examining the data published by the ISS (Istituto Superiore di Sanità) and I had confirmation: the vaccinated are more at risk of getting sick. For example, the following frequencies are observed in the data reported in table 14A of the ISS Extended Report relating to the month of October 2022 and published on October 28, 2022:

	Infected	Not Infected	Total
Not vaccinated	101,075	6,708,164	6,809,239
Vaccinated	982,919	46,736,286	47,719,205
Total	1,083,994	53,444,450	54,528,444

Observed frequencies

² www.sintropia.it/Omeopatia.pdf an English translation is available at: www.sintropia.it/journal/english/2014-eng-2-01.pdf

It is possible to calculate the expected frequencies, in the absence of a difference between vaccinated and unvaccinated. The table is the following:

	Infected	Not Infected	Total
Not vaccinated	135,363	6,673,876	6,809,239
Vaccinated	948,631	46,770,574	47,719,205
Total	1,083,994	53,444,450	54,528,444

Expected frequencies

Comparing the two tables, we see that instead of getting less infected, vaccinated people get more infected. For example, in the absence of a vaccine effect, 948,631 vaccinated patients were expected to get infected, instead the observed value is higher: 982,919. In other words, the vaccine works, but in the opposite direction: it increases the number of people who become infected. On the contrary, the unvaccinated who become infected should have been 135,363, but the observed value is lower: 101,075. To assess how strong this “opposite” effect of the vaccine is, the difference between the expected and observed frequencies is calculated using statistical indices, such as the Chi Square, which compares the observed frequencies with the expected ones. When the Chi Square value is 3.841 the risk of being wrong in stating that there is an effect is 5%, with a value of 6.635 the risk of being wrong in stating that there is an effect is 1%. In science, the goal is almost always to reach a risk lower than 1%. In the case of our tables, comparing the observed frequencies with those expected, we obtain a Chi Square value of 10,125 (ten thousand-one hundred and twenty-five), an incredibly high value which allows to state with absolute certainty that the effect of the vaccines is to make more people become infected. This effect is so marked and well documented that as early as October 2022 the New York State Supreme Court ruled that being vaccinated does not stop the spread of Covid-19 and that the Covid-19 vaccine is not a vaccine, ordering the immediate reinstatement of all unvaccinated personnel and the payment of arrears. Vaccines for Covid-19 do not have the protective characteristics of vaccines: intensive care units are full of vaccinated people and almost only vaccinated people die of Covid. The data show that if a person gets vaccinated, the risk of getting infected and of infecting increases, and also the risk of ending in an intensive care unit or dying is greater.

3. The adverse effects are simply staggering. Studies on samples of several thousand vaccinated people show that at least one in eight hundred vaccinated people dies in the first six months after vaccination, due to the adverse effects caused by the vaccine. That means millions of vaccine deaths in the first six months. Furthermore, the thrombotic occlusions caused by the spike proteins produced by the Covid vaccines and present mainly at the level of the capillaries, are the main cause of the sharp increase of myocarditis and pericarditis, of heart attacks, cerebral ischemia, and

gastrointestinal strokes, of neurological pathologies, tumors and autoimmune diseases. Finally, VAIDS, vaccine-induced immunodeficiency disease, is spreading among the vaccinated and a growing number of sudden deaths are being observed.³ This situation is now referred to as the “pandemic of the vaccinated”. Mortality of vaccinated people has increased in 2022 globally by more than 25% (for all causes of death).

In the scientific world, hypotheses and explanations are tested thanks to data and empirical validation, until arriving at an explanation that everyone can share, verify, expand, and further question. On the contrary, during Covid a single narrative was imposed using authorities to be listened to and followed, even when their statements contradicted data, empirical evidence and the scientific world that was stating something else and was not given any space. Those who reported data and facts that contradict the single narrative were branded as “No-Vax”. The division between the good “Pro-Vax” and the bad “No-Vax” was imposed and this division served to impose ineffective and dangerous “vaccines”.

In 2021 I started publishing data on Covid monthly. These publications were then enriched with information coming from doctors and from fields such as global warming and the conflict between West and East.

Internationally renowned virologists, including Luc Montagnier, discoverer of HIV, Nobel prize for medicine and professor emeritus of the Pasteur Institute in Paris, have shown that the immune system of the vaccinated people is so depressed that it favors the onset and spread of diseases that can be fatal. Luc Montagnier’s group assessed that just considering the ADE mechanism (Antibody-Dependent Enhancement) it is expected that 80% of those vaccinated with three doses have a life expectancy of less than four years. It is therefore likely that in the coming months the pandemic of the vaccinated will become the dominant theme.

The race to find remedies has begun. This is a totally new field that has so far led to modest results.

Although I am not religious, I found an element of hope in the Apocalypse of St. John (the book of Revelation). The Apocalypse unequivocally associates the Western Covid-19 vaccines with the mark of the *Beast* and describes the pandemic of the vaccinated as the wrath of God pouring out painful and deadly plagues on those who have accepted the mark of the *Beast* and who worship the *Beast*, doomed to burn for eternity in hell.

In its drama, however, the Apocalypse offers a solution. The mark of the *Beast* is always associated with the worship of the *Beast*. In other words, those who stop worshipping the *Beast*, despite being marked, will be spared by the wrath of God and become immune to the pandemic of the vaccinated.

The book begins from the end. Instead of starting from the scientific data, it starts from the Apocalypse and the pandemic of the vaccinated, then it presents the statistical data on

³ <https://rumble.com/v1wac7i-world-premier-died-suddenly.html>

Covid. It ends with a chapter on the adoration of the *Beast*, and one on how to free ourselves from the *Beast* and build a society where harmony and well-being reign.

In the first chapter I introduce myself. This will let the reader understand why I stand outside the dominant narrative.

I then move on to the Apocalypse and the incredible elements of contact with the current situation.

The third chapter is dedicated to the pandemic of the vaccinated and was written by doctors and researchers with whom I collaborated and who asked to remain anonymous.

Then a chapter that retraces the history of Covid follows. This chapter uses the data published at www.worldometers.info/coronavirus/. It shows that in early March 2020, China was using effective treatments that had stopped the Covid pandemic. However, these treatments were banned in the West, allowing Covid to spread freely. The claim that there were no effective cures and that the only solution was provided by the vaccine was false and was aimed at terrorizing people and forcing them to get vaccinated.

Those who promoted the vaccination are the same people who promote the narrative of global warming. However, data shows something very different. It tells that we are quickly approaching the next ice age! Those who show, using scientific data, that the problem is the ice age are ostracized, lose their academic positions, fail to publish in scientific journals or speak at conferences. It seems that humanity must be kept in the dark about the impending ice age. Without any shame, the ruling elite expresses the need for a strong reduction of the population and this project seems to save only a few million people.

The elite is made of people who control money, thanks to the ownership of central banks (which are private) and financial institutions. Money is vital and the control of money provides real power over nations and people. We live in a society that needs money and loves money. In the book of Revelation this is referred to as the *Beast*. Controlling money gives the *Beast* real power. Before the pandemic few were aware of this real power, since the *Beast* always operated behind the scenes; then, with the vaccine and the forced vaccination, the *Beast* revealed itself. The vaccine, without which people could not buy or sell, is described in the Revelation as the mark of the *Beast*.

Money has an incredible charm and has transformed humanity into worshipers of the *Beast*, into people capable of any wickedness. In the chapter “The worshipers of the *Beast*” statements are reported that undoubtedly recall the Nazi ideology, an ideology that seems to permeate the Western world.

Even if the number of infected people, of people in intensive care units and of Covid deaths is today in many cases greater than what was recorded at the height of the pandemic, the media has stopped the terrorist campaign that was used to push people to get vaccinated and we have now entered a new phase that in this book is named the “after Covid”.

The possible scenarios are many. The *Beast* wants to drastically reduce the world’s population and vaccines appear to have this function. Fortunately, there are other

possibilities. China and Russia are against a drastic reduction of the population and believe that the planet can support a larger population. Finally, people like Elon Musk believe that our planet could become inhospitable, and it is therefore necessary to transfer forty-million people to Mars, as soon as possible, to continue our civilization on another planet.

To maintain the current level of population it is necessary to shift from the present entropic and degrading societies to new forms of coexistence. A principle symmetrical to entropy is syntropy. This principle has been known for centuries, it is demonstrated by the fundamental equations of the universe and by innumerable experiments, but it has always been censored, thus forcing people to live in degradation and suffering.

Entropy diverges and increases disorder, chaos, and suffering; syntropy converges, unites, increases order, harmony and well-being. Entropy and syntropy are united by the same equation and like yin and yang, Shiva and Shakti, interact constantly transforming reality. Currently, in the West, entropy dominates, and this is the cause of crises, conflicts, suffering and wars.

In addition to the external *Beast* that controls nations, societies and people through money, there is also the internal *Beast* that manifests itself with vital but invisible needs of meaning, of which we are not aware and to which we give wrong answers. It is necessary to become aware of these invisible needs and the most appropriate way to respond to them, in order to defeat the inner *Beast* which manifests itself in the form of depression and angst.

The defeat of the inner *Beast* and the rejection of the outer *Beast* allow to move away from the adoration of the *Beast*. According to the Apocalypse, this makes people immune to the plagues and the pandemic that is starting to affect the vaccinated.

For those who have been vaccinated the book “*Apocalypse and Syntropy*” may be dramatic, difficult to read, but it offers hope, a way out of the pandemic that is now affecting the vaccinated and of which more and more people are becoming aware.
